## Chem 41c Midterm Exam

Stoltz, Spring 2008, May 2, 2008
The exam begins when you turn to page 2. You have 55 minutes to complete the exam. This is a closed note and closed book exam with no collaboration. You may use the periodic table at the front of the room or the one on the last page of this packet. You may not use any other materials. The exam has a total of 130 points. You're grade will be calculated based on 120 points (i.e., you have 10 bonus points built-in). (Also, remember that your midterm counts 60 points toward your final grade, e.g., 5 quiz points $=10$ points here). Good luck.

There are 10 pages in this exam packet.

Name: $\qquad$

1. Predict the major non-volatile products (if any) of the following reactions or sequences. (5 points each) a.

b.

c.

d.

e.

f.

2. Provide reagents for the following transformations. They may be multistep processes (none are longer than 2 steps). (5 points each)
a.

b.

3. one of many oxidations
4. CH2PPh3

c.

5. Based on your knowledge of carbonyl compounds, please provide a reasonable and detailed mechanism for the following reaction (10 points).

6. An asymmetric synthesis of (-)-Morphine has been reported utilizing the Palladium-catalyzed reaction described below as the key step.

a) The active catalyst for the reaction is believed to be $\mathbf{B}$, not $\mathrm{Pd}(\mathrm{TFA})_{2}\left(\mathrm{Ph}_{3} \mathrm{P}\right)_{2}$. Give the formal oxidation state, $\mathrm{d}^{n}$ descriptor, and electron count for each complex. Also, what is a general name for the process to get to $\mathbf{B}$ from $\mathrm{Pd}(\mathrm{TFA})_{2}\left(\mathrm{Ph}_{3} \mathrm{P}\right)_{2}$ ? (HINT: oxidation, reduction, or ligand exchange) (10 points)

b) Label each of the boxes below describing the key steps in the catalytic cycle. Also, what is the structure of $\mathbf{D}$ (clearly show stereochemistry)? (20 points)

10 point BONUS: Name of reaction? HECK
Role of PMP? 1. Reduction of Pd(II)
or 2. Neutralize HI
5. Provide a reasonable synthesis of 2 from 1. (20 points)

6. a) Rank the following compounds in order of reactivity with MeMgBr . (5 points)

A

B

C

D

$E$

$$
\square>\square>\square>\square
$$

ACEDB
b) Draw initial adduct between MeMgBr and each compound (A-E). (5 points)

B

c

c) Predict the product after addition of an excess of MeMgBr and a work-up with $\mathrm{H}_{3} \mathrm{O}^{+} / \mathrm{H}_{2} \mathrm{O}$ (5 points).
